

Docket No. 5044

ELASTIC ARTICLE SUSPENSION DEVICE FOR AN INFANT

Abstract of the Disclosure

5           An article suspension device for infants  
includes a length of cord having a continuous  
encircling member at one end for connection to a  
highchair or stroller or the like. An elastic loop  
is attached at the second end of the cord including  
an adjustable sleeve which allows for adjustment of  
10       the length of the elastic cord as well as adjustment  
of the elastic loop. The device further includes a  
fabric covering in outer surrounding relation to the  
cord.
